

## TEXO FSX HIGH SPEED LOOM

Once again in this changing business environment we have followed our tradition; measuring up to the needs of our customers. We are now proud to launch our latest step in loom evolution and introduce you to our high speed loom type FSX.

The FSX loom derives from our successful FormStar Loom.

It incorporates proven systems such as:

- ➔ Pozi-Grip weft presentation system
- ➔ TEXO Weft Tension System TWTS
- ➔ TEXO Direct Individual Servo Controlled Dobby type DISCO™.

What makes the FSX loom stand out is its TEXO Dynamic Drive TDD, which gives you a quiet loom that effortlessly produces a high quality fabric with a base tension of 1000 kg per meter at speeds in excess of 150 ppm at a set up 5.5 meter weaving width.

The FSX loom design allows adaptation to a wide range of weaving productions such as: Textiles, Filters and PMC production. Our strength is to develop weaving equipment that meets all requirements.

For additional information please feel free to contact our sales department or your closest TEXO representative.
